EASY DATALOGGER

FOR IDAQ

Just one click. The answers you are looking for.

EASY DATALOGGER

FOR IDAQ

Easy Datalogger is the best solution available on the market for measuring signals, designed to help you make your company even more efficient. Easy Datalogger is the software solution ideal for technicians, researchers and process managers productive. Easy Datalogger is for everyone who wants to measure and analyze the data.

Automation

Thanks to its smart assistant, Easy Datalogger automates the reception and the control of all types of signals from machinery and sensors. You decide how to work, remotely from the phone or the computer, Easy Datalogger takes care of the rest.

Instant View

Easy Datalogger contains technologies innovative: drag and drop into the program the image of what you want to monitor. Thanks to the Instant View* function, Easy Datalogger automatically builds your test panel and shows you all the graphs in real-time that you need.

Adaptable

Thanks to Easy Datalogger, you have an automatic registration system which adapts to your needs. It guarantees you to have your data just in a click everytime you want and to make them shareable to the whole team on Coud.

Without Limitations

Easy Datalogger is scalable. It recognizes any third-party acquisition device**parts automatically configuring it to be able to exploit its full potential. With Easy Datalogger you connect all the sensors and the machinery that you want to monitor without restriction.

Speed and Accuracy

Measure what other data collection tools do not perceive: Easy Datalogger allows you to monitor in detail all phenomena at very high speed and uncompromising precision.

Pure simplicity

Use the most intuitive program. The simple and immediate interface of Easy Datalogger allows you to be productive right away and to save time to collect measurements you want.

Easy Datalogger is available for Windows 7 and Windows 10.
* Discover the simplicity of Instant View on our Youtube channel T4SM - TOOLS for SMART MINDS Srl
** Easy Datalogger requires iDaq to connect devices and to be able to receive data from them.
