

EASILY INTERCONNECTED
MACHINERY AND SENSORS IN
SECONDS

THE BEST SOLUTION TO INTERCONNECT MACHINERY AND SENSORS

THE BASIS FOR INDUSTRY 4.0

iDaq includes enabling technologies of Industry 4.0: it can communicate with machines and plants of different manufacturers, regardless of the degree of automation, technology and communication protocol, centralizing data collection.

iDaq is the software that allows data collection from all types of sensors and machines, creating an interconnection between all the systems of the production cycle.

A STRATEGIC APPROACH TO MEASUREMENT

iDaq has the ability to measure very accurately high-speed phenomena that escape most other data collection tools. It is the ideal platform for scientific analysis, technical investigation and strategic decisions based on data: for this reason, it has been chosen by various companies and research centers in the world. It's easy, scalable, and it can adapt to the change of your business.
